AutoCAD Crack Mac in Office 365 AutoCAD is available as part of Microsoft Office 365. This includes a free personal Office account. Products There are three main AutoCAD products. AutoCAD LT and AutoCAD Architecture AutoCAD LT is aimed at students and hobbyists. It is a two-year subscription, and does not allow for custom features or enhancements. Instead, it is focused on being a simple CAD program, ideal for creating basic 2D drawings. There are also an AutoCAD Basic and AutoCAD Drafting Basic subscription versions. AutoCAD Architecture is a one-year subscription that includes AutoCAD LT and features such as the ability to generate 3D drawings, complex documentation, and parametric drawing. Both AutoCAD LT and AutoCAD Architecture include basic 2D drawing tools, parametric tools, 3D modeling tools, CAD operations, and 2D Drafting. AutoCAD LT does not allow the use of paths, dynamic data, or color. In 2016 AutoCAD LT will be removed from Office 365. AutoCAD Civil 3D AutoCAD Civil 3D is a subscription-based product and is designed for civil, mechanical, electrical and architectural designers. While social media has become an important source of information and social connection for people, it can be a source of threat when used unwisely. Social media is a growing field of study for the teaching and learning of a dental curriculum. However, few studies have looked into the use of social media among dental students. The present study was designed to investigate and assess the use of social media among dental students in Saudi Arabia, to find out their pattern of use and their perceptions regarding the use of social media. Two hundred and eight final year students, enrolled in a Public Dental College in Riyadh, were given a self-administered questionnaire to evaluate their use of social media and their perception regarding its use. There were 84 males (40.4%) and 124 females (59.6%) with an age range of 20-24 years. The majority of the students (76.6%) had a smartphone and there was no significant difference in the number of years of dental education between smartphone users and non-users ( $P = 0.558$ ). While 26.5% of the students accessed social media daily, only 11.4% of them used it on a regular basis. Students used social media mainly for entertainment (39.1%), to chat with family (26.1%), to share their academic work (12.5%), and to get information about their school (8.4%). There was no significant difference in the frequency of social media use between males and females ( $P = 0.224$ ). While 46.3% of the students believed that social media was good for them, 33.3% believed it to be a threat and 20.5% believed it to be neither good nor a threat. A significant negative correlation was found between the use of social media and perceptions regarding its use. The majority of dental students used social media, but only a minority used it regularly. The students perceived social media as a
