

By default, Tekla Structures 2019i is installed in C:\\Program Files\\Tekla Structures\\ and environments in C:\\ProgramData \\Trimble\\Tekla. You can change the installation location, but not the environment. Installing in the Trimble data folder avoids conflicts with other Trimble programs and third party applications designed for use with Trimble Desktop. For example, if Trimble Desktop and Trimble Access are running Tekla Structures, Trimble Access will use a different location than the other two applications to save conflicts between the three applications.
